

## CRITICAL DETAIL:

## ENERGY + HEALTH PROGRAM

### EXHAUST FAN WALL TERMINATION INSTALLATION

1. Find the approximate location of the termination in the attic or crawlspace and note structural member locations.

#### ✓ LOCATE STRUCTURE

2. Locate the duct termination on the exterior and position it in the center of a course of siding.

#### ✓ LOCATE HOLE

3. Outside of the house, trace the outline of the duct, avoiding structural members.

#### ✓ TRACE OUTLINE

4. If installing the termination through the attic, cut a hole the diameter of the duct.

#### ✓ CUT HOLE

5. If installing the termination through the crawlspace, use hammer drill to cut hole. Use a masonry bit and chisel for a clean hole.

#### ✓ DRILL HOLE

6. Screw the steel flange vent cap into place and verify the cap moves freely. Caulk the underside of the steel flange vent cap.

#### ✓ INSTALL VENT CAP
